

The machine is used for cutting out parts of various shapes from leathers, synthetic materials, rubber, paper etc. by cutting die.

The oil way system is specially designed for convenient adjustment of the cutting head height. No other adjustment is needed after the height of cutting die is changed.

The swinging motion of the arm is controlled through servomotor and the machine is operated by two hands only.

## TECHNICAL PARAMETERS

Cutting power.....	kN	220
Cutting arm stroke.....	mm	90
Width of cutting arm.....	mm	370
Working table dimensions.....	mm	900x430
Motor output.....	KW	1,1
Machine dimensions : width.....	mm	1050
depth.....	mm	1000
height.....	mm	1500
Machine weight (without oil).....	kgs	690
